recent publications - journals.uchicago - on cyclical variations in eruption at kilauea. second report of the hawaiian volcano observatory, of the massachusetts institute of technology and the hawaiian volcano research association. massachusetts institute of technology. [cambridge, mass., 1917.] -woodbridge, t. r. ore-sampling conditions in the west. [u.s. depart- ment of the interior, bureau of mines, technical paper 86. washington ... **vol lo y - soest** - variations during an eruptive episode were largely caused by up to 5% fractionation in a shallow magma chamber beneath puu oo during repose periods. **volcano infrasound - vhub** - overview vw02: field and remote sensing of volcanic unrest 1 july 2011 2 1) infrasound background 2) volcano infrasound background a. nomenclature **41st lunar nd planetary science conference (2010) 2145.pdf a** - our results show that variations in the flexural stress state with depth help control the locations of first failure on magma chambers and subsequent intrusion geometries. near the symmetry axis, the "differential ... **recent and future volcanism on dormant mars. summary ...** - recent and future volcanism on dormant mars. k. l. mitchell and l. wilson, environ-mental science dept., lancaster university, lancaster la1 4yq, uk.k.l.mitchell ... **reply [to "comment on 'a single-force model for the 1975 ...** - harvey and wyss [1986] appealed to variations in fault orientation to explain the complex nature of accelerograms recorded at two stations from the kalapana earthquake. **measuring large topographic change with insar: lava ...** - with insar: lava thicknesses, extrusion rate and subsidence ... about the dynamics of an eruption. using differential insar phase delays, it is possible to estimate height differences between the current topography and a digital elevation model (dem). this does not require a pre-event sar image, so it does not rely on interferometric phase remaining coherent dur-ing eruption and emplacement ... **the shallow structure of kilauea caldera from high ...** - a large intrusive complex, apparent cyclical caldera formation, and continual mass addition without inflation, however, can also be explained by extensional rifting caused by the continual southward movement of kilauea's unstable south flank. **measuring large topographic change with insar lava ...** - these showed a cyclical pattern i n extrusion with a short (3-6 yr) burst of high rate extrusion, followed by a longer period (3-11 yr) at a lower rate, but with an overall decay in extrusion rate between **short term exogenic climate change forcing by daniel ...** - additionally, mt. kilauea erupts constantly, large vei 6+ events occur roughly every couple of decades, and the last super volcano eruption occurred in toba, indonesia around 60,000 years ago. **remote sensing of environment - university of hawaii** - is tested on satellite observations from kilauea volcano, hawaii, and is found to reduce the impact of higher fre- quency cycles and reveal the presence of longer-period geophysical signals. in addition to the identification of a signal common to different measurement techniques, an underlying cyclical pattern was found in the omi so 2 observations (periods of ~7.9 and 3.2 days) generatedby ...
